

# Silicone rubber selection guide

**'TORAY'**

A DOW and TORAY Joint Venture

# Silicone rubber selection guide

Silicone rubber is a synthetic elastomer made of silicone polymer and silica, etc. It has excellent characteristics such as heat resistance, cold resistance, weather resistance, chemical resistance, electrical characteristics, and compression characteristics, etc. that natural rubber or general synthetic rubbers do not have. Because of this, it is used in wide array of fields, from electronics and electrical applications to automobiles, building materials, medical applications, food, leisure and sports applications, etc., widely adopted by many products inside and outside of Japan.

Furthermore, the optimum product can be selected by the use condition, application, and processing process.

## HCR High consistency rubber

It is a rubber with an excellent weather resistance in a wide temperature range. It also has the unique chemical characteristics and mechanical characteristics not seen in organic elastomers.

## FSR Fluorosilicone rubber

It is a silicone rubber with excellent oil resistance, heat resistance and cold resistance.

## LSR Liquid silicone rubber

It is a liquid silicone rubber. High speed production is possible using a Liquid injection molding (LIM).

## F-LSR Fluoro-liquid silicone rubber

It is a fluoro-liquid silicone rubber. High speed production is possible using a Liquid injection molding (LIM).

## Typical products and applications

	Page	Product grade		Main applications

(This is not the specification value.)

Measurement: In compliance with JIS K 6249

Rebound: In compliance with JIS K 6255

Test piece: The test piece is prepared at 170°C x 10 minutes curing and 200°C x 4 hours post curing.

For XIAMETER™ SH 74X series, the test piece is prepared at 170°C x 10 minutes curing, without post curing.

\*1 Dosage of curing agent is per 100 parts of the product.

\*2 Linear shrinkage depends on the curing conditions such as curing agent, curing temperature, and size of molded product.

\*3 Please refer to the notes described later regarding the food use laws and regulations.

Rebound: In compliance with JIS K 6255

Test piece: The test piece is prepared at 170°C x 10 minutes curing and 200°C x 4 hours post curing.

For SILASTIC™ SH 502 U A/B and SILASTIC™ SH 1447 U A, the test piece is prepared at 160°C x 10 minutes curing and 200°C x 4 hours post curing.

For SILASTIC™ SH 82 UD, the test piece is prepared at 120°C x 10 minutes curing and 250°C x 24 hours post curing.

\*1 Dosage of curing agent is per 100 parts of the product.

\*2 Linear shrinkage depends on the curing conditions such as curing agent, curing temperature, and size of molded product.

\*3 The unit is Ω•cm.

\*4 Please refer to the notes described later regarding the food use laws and regulations.

(This is not the specification value.)

Mix Liquid A:Liquid B = 1:1

Test piece :The test piece is prepared at 120°C x 10 minutes curing and 200°C x 4 hours post curing.

Measurement: Hardness is measured in compliance with ASTM D2240.

Tensile strength, elongation and modulus are in compliance with DIN 53504.

Tear strength is in compliance with ASTM D6248B.

Compression permanent set is in compliance with ASTM D395.

Chemical resistance is in compliance with ASTM D471.

\*1 Viscosity: Shearing speed 10 s<sup>-1</sup>

\*2 Injection molded rubber sheet is given post curing (200°C x 4 hours)

## Curing agent/primer

Curing agent							
	Product name	Main ingredient	Content	Appearance	Application	Food Use laws and regulations*	
						US: FDA	EU: BfR
Peroxide cure	SILASTIC™ RC-3 40P FD	Dicumyl peroxide	40%	White paste	For general molding and carbon filler (conductive rubber)	○	○
	SILASTIC™ RC-4 50P FD	2,5-Dimethyl -2,5-bis (t-Butyl peroxy) Hexane	50%	White paste	For thick molding, stock not requiring post curing, and carbon filler	○	○
	SILASTIC™ RC-8	2,5-Dimethyl -2,5-bis (t-Butyl peroxy) Hexane	22%	White paste	For yellowing prevention and rapid curing	○	
	SILASTIC™ RC-14 A	Bis (4-Methylbenzoyl) Peroxide	50%	White - light straw paste	For hot air vulcanization, and sponge	○	
Pt cure	SILASTIC™ RD-27	Platinum catalyst		Gray-white translucent	For rapid cure, and low temperature cure	○	
	SILASTIC™ MR-91	Platinum catalyst		Off-white		○	
	SILASTIC™ RD-7	Cross-linking agent , SiH polymer		Gray-white translucent		○	○
	SILASTIC™ RD-9	Inhibitor		Gray-white translucent		○	○
	SILASTIC™ RD-201	Inhibitor		Gray-white translucent		×	

(This is not the specification value.)

\* Please refer to the notes described later regarding the food use laws and regulations.

\* The hardening agents used differ depending on the application and use condition.

Primer					
Product name	Appearance	Non-volatile*(%)	Solvent	Drying condition	Substance
SILASTIC™ DY 39-067 Primer	Colorless transparent	2%	n-Heptane	Room temperature 1~2 hours	Metal, Plastic
SILASTIC™ DY 39-123 Primer	Colorless - light yellow transparent	12%	n-Heptane	Room temperature 30 minutes or longer	Metal
SILASTIC™ Primer-X SILASTIC™ Primer-Y**	Colorless - light yellow transparent	9%	n-Heptane	Room temperature 30 minutes or longer	Metal, Plastic

(This is not the specification value.)

\* Non-volatile component: After drying at 70°C x 1 hour

\*\* Please use SILASTIC™ Primer-X and SILASTIC™ Primer-Y at a 1:1 mixture.

## Pigments/ Additives

Pigments								
Product name	Color	Recommended adding amount	Color difference			Main ingredient	Food Use laws and regulations*	
			L*	a*	b*		US: FDA	EU: BfR
XIAMETER™ CP-11 White Rubber Additive	White	1-2%	96.65	-0.66	3.09	Titanium dioxide	○	
SILASTIC™ CP-17 Red Rubber Additive	Red	1-2%	27.86	24.85	12.37	Manganese complex	×	
XIAMETER™ CP-18 Black Rubber Additive	Black	1-2%	21.48	0.45	-0.01	Iron trioxide	○	○
XIAMETER™ CP-35 Black Rubber Additive	Black	1-2%	22.45	0.38	-0.22	Carbon black	×	
XIAMETER™ CP-2 Blue Rubber Additive	Ultramarine	1-2%	24.20	17.21	-39.57	C.I. Pigment blue—29	○	○
XIAMETER™ CP-138 Blue Rubber Additive	Blue	1-2%	23.12	12.09	-28.31	Pigment blue-15	○	
XIAMETER™ CP-21 Brown Rubber Additive	Reddish brown	1-2%	42.10	34.43	30.20	Iron oxide (III)	○	
XIAMETER™ CP-177 Red Rubber Additive	Red	1-2%	45.45	60.72	39.11	Organic pigments	○	
XIAMETER™ CP-124 Red Rubber Additive	Red	1-2%	27.85	31.07	1.62	Organic pigments	×	
XIAMETER™ CP-144 Yellow Rubber Additive	Yellow	1-2%	74.52	19.93	81.99	Organic pigments	○	
XIAMETER™ CP-181 Yellow Rubber Additive	Yellow	1-2%	77.57	1.10	83.03	Organic pigments	×	

\* The colors and color differences shown above are the result of the sheet hardened with XIAMETER™ RBB-6650-50 Base / SILASTIC™ RC-4 50 P FD Rubber Additive / pigment = 100 / 0.6 / 2.0 at 170°C x 10 minutes curing, and 200°C x 2 hours post curing.

The actual colors differ depending on the type, hardening agent, and hardening condition of the silicone rubber products. Please directly confirm them.

\*\* Please refer to the notes described later regarding the food use laws and regulations.

Additives					
Product name	Appearance	Recommended adding amount	Application	Food Use laws and regulations*	
				US: FDA	EU: BfR
SILASTIC™ MR-1 Rubber Additive	White	0-0.3%	Improve mold release, cable release from wire	○	
SILASTIC™ MR-3 Rubber Additive	White	0-0.3%	Improve mold release	○	
SILASTIC™ MR-5 Rubber Additive	Translucent gray	0-0.5%	Improve crepe hardening and soften unvulcanized stocks	○	
SILASTIC™ MR-8 Rubber Additive	White	0-2.0%	Increase linear shrinkage	○	
SILASTIC™ MR-14 Rubber Additive	White	0-0.3%	Improve mold release and 2-roll release	○	

\* Please refer to the notes described later regarding the food use laws and regulations.

# Dow Toray Co., Ltd.

Please contact [dow.com/ja/contactus](http://dow.com/ja/contactus) regarding the products in this catalog.

## Handling precautions

PRODUCT SAFETY INFORMATION REQUIRED FOR SAFE USE IS NOT INCLUDED IN THIS DOCUMENT. BEFORE HANDLING, READ PRODUCT AND SAFETY DATA SHEETS AND CONTAINER LABELS FOR SAFE USE, PHYSICAL AND HEALTH HAZARD INFORMATION. THE SAFETY DATA SHEET IS AVAILABLE ON THE DOW WEBSITE AT [WWW.DOW.COM/JA-JP](http://WWW.DOW.COM/JA-JP), OR FROM YOUR DOW SALES APPLICATION ENGINEER, OR DISTRIBUTOR.

## Food-contact use

The products described in the Food use laws and regulations contain FDA or BfR approved ingredients, and are in compliance with FDA 21. CFR 177. 2600 and BfR Recommendation XV, which are the regulations of food additives concerning the repeatedly used food-contact rubber products. However, these rubber products need to be processed by the recommended conditions. If they are processed under different conditions, these products may not comply with these regulations.

Manufacturers need to process them under their own specific conditions, and implement a test to evaluate the extract of its own composition product.

Please refer to "Food Regulatory Profile" for the details regarding the compliance of these products to the food-contact use.

However, please confirm the safety of the final product with your company to determine whether it is usable.

## Limitation of medical and pharmaceutical use

This product is developed and manufactured for general industrial use. This product is neither tested nor represented as suitable for medical or pharmaceutical uses. In addition, it is not declared as such.
